Subscriptions

- Allow subscribing to events in the GraphQL Server

- When an event is triggered the subscription gets a notification

- Usually used in conjunction with Mutations

- Rarely used

Subscriptions Syntax

- There are three main parts in the subscription request:

Subscription Object Type

Subscription Name

Returned Data

Subscriptions Syntax

- There are three main parts in the mutation request:

subscription object type

Defines that we're running a subscription and not a query

```
subscription {
    bookAdded {
        bookId
        name
    }
}
```

Subscription Name

The name of the subscription we want to subscribe to

Returned data

Reflect the new object that was added

- The first step is to define and configure the subscription in

code
